11. **ELECTRICAL - Please check the box below to confirm you have read and understand how the electrical system works** \*

I understand that the campers are designed to properly operate by being plugged into 30 amp service or ran by the onboard generator (for driveable RV). I understand and will investigate on my end to make sure I have a campsite or generator that can properly handle powering the camper. I agree not to use a 120 volt adapter when trying to run AC. I also understand the onboard 12 volt battery in the travel trailer is meant to power the CO2 detector and will not be a sufficient power source for use while camping.

Damage to awnings is very common and can happen from rain, gust of winds, etc. The typical cost to fix just one slightly bent awning arm can be \$400 or more. We strongly recommend you DO NOT use the awning at all, but if you do remember any damage is 100% paid for out of your damage deposit.
