

Delivery Procedures

When the trailer is delivered, the renter does not have to do anything besides utilize the kitchen, make up sleeping areas, and put out awning if needed. Below are written instructions in case there was anything that was forgotten.

The main control panel is located directly to the left of the bathroom door to operate the system.

Located on the operating system.

Lights- Flips all the main overhead lights on

Hot Water- turn hot water heater on electric.

Propane option- Be sure that the propane tank is turned on then push the water heater button on the display screen and choose gas.

Slide out- **Please don't move the slide out once it has been delivered.**

Awning- Extend the awning all the way until it stops. **PLEASE BRING AWNING IN WHEN YOU ARE AWAY FROM THE TRAILER OR IN AT NIGHTTIME****

Tank levels- Shows how full the tanks are. *Note the black tank hardly ever says completely empty due to solid particles on the sensors.

Water pump- Only used when there is no city water supply. The pump will use water from the holding tank. **Do not use if hooked up to city water. It can only be used with water from tanks.**

Refrigerator- **The refrigerator can run on either electricity or propane. Keep this selected on auto unless you specifically want to use propane. Be sure to push the button to the ON Position or the fridge will not get cold.**

*The fridge will take time to cool. I try my best to pre-cool before deliveries.

Oven- There is a pilot light on the bottom level of the oven. Press and hold gas while holding the long lighter (found in the kitchen drawer) close to the pilot light. You will hear a light clicking noise letting you know it's coming on. You will see a small blue line of gas light letting you know the oven is on and adjust the temp.

Furniture- To use the table as a bed pull up on the table to release it from the metal foot posts. Then remove the footposts and leave them on the floor under the table and place the table on the wood supporting edges. The rectangular cushions will fill the void. Curvy cushions can be stored beneath the platform.

To use the couch as a bed, take off the back cushions, and pull up and pull forward to lay the couch into the bed position. Use metal legs for support. To return to the couch position pull up on the front and fold the metal leg back in. From underneath, push the middle part so that it folds onto itself and back in to the under part of the couch. Replace the cushions.

Before you leave

Strip all beds that were used.

Place all sheets, pillowcases, blankets, and soiled towels on the couch.

Clean trailer based off procedure list and the option you have picked/paid for.

Take out all trash.

If the TV was pulled away from the cubby hole that it sits in, re-secure the TV back with the black bungee and verify that it is secure in place.

Check all ceiling vents and windows have been closed.

Lock all outside cubbies.

Double check to make sure nothing was left behind in all cabinets.

Leave key outside on the BBQ and close all compartment doors.
