_Weight and Speed of the Unit:

• Weight Distribution:Contents of the RV must be evenly distributed.

- Regular Tire Inspection: Every time you make a stop, whether for fuel or for the night, you need to recheck the tire pressure and give the tires a visual inspection.
- Immediate Pull Over: Pull over immediately if you suspect there are any issues with any of the tires. If a tire is allowed to fail, the damage has already been done and will grow worse with each additional rotation of the failed tire.

NOTICE WHEN NOT CONNECTED TO SHORE POWER!!!

Coach battery life is very short

The coach batteries run your lights (inside & out), monitors, refrigerator, slide out, and water pump. They also run your radio/stereo. Plugging electronics and appliances into the outlets on the coach AC/DC will also run off your coach batteries.

Continued use of your batteries will drain them quickly.

Typical battery life (fully charged battery) can be as low as **3-4** *hours* if you run all your lights and a TV/stereo, etc.

Recharging your coach batteries can take a very long time (and be expensive): By generator: 8-12 hrs; By running engine: 4-6 hrs; Plugging into shore power: 8-12 hrs; While driving: 4-6 hrs; (times approximate)

HELPFUL HINTS:

- 1. Only have lights on when you need them.
- 2. Monitor your power usage often
- 3. Run your engine or generator during the day for a few hours to recharge the batteries depleted by night time use. (Do not leave vehicle unattended).
- 4. Set the Automatic Generator Start (AGS) system to engage once the batteries drop below 12.1V. Only do this if you are in an outdoor/well ventilated location. (IF EQUIPPED)
- 5. Hook up to campground electricity whenever possible!

Do not completely deplete battery power. This may destroy the battery. You may be charged for the replacement.

COLD WEATHER NOTICE

THE RENTER IS 100% RESPONSIBLE FOR DAMAGE TO THE RV CAUSED BY FREEZING TEMPERATURES

READ BELOW TO AVOID COLD WEATHER DAMAGE

Your RV rental is equipped to handle cold weather, however, additional steps must be taken to prevent damage while camping in below normal conditions.

When temperatures are expected to be below 32 degrees Fahrenheit for more than 3 hours.

- 1. Turn on the propane furnace inside the RV to a minimum temperature of 50 degrees Fahrenheit. This includes if you are not staying inside the RV overnight or are away for an extended period of time during the day. Ensure you have an adequate power supply (either battery or shore power) to allow the heater to function on "auto" setting
- 2. If you RV is equipped with "Tank Heaters" turn them on. These are 12V heating pads that prevent the waste tanks from freezing. They turn on via thermostat automatically as needed.
- 3. Turn on the hot water heater to propane (LP) or electric if connected to shore power.
- 4. As an additional precaution, if you are not connected to a water source, make sure the water pump is off and you have opened at least one of the faucets (both hot and cold side)
- 5. Make sure all of the lower compartment exterior doors are closed and secured.

If you have questions, please reach out to a member of the team for help.

Permanent damage may result. On extreme hot days the unit may only be able to cool to 20 degrees below the outside temperature. Close windows, doors, and shades. Use ceiling hatch vents/fans

I RECHARGE BATTERIES

Morning and Night if not hooked up to shore power. Run and idle the engine for several minutes. Run the generator for an hour or two then turn everything off.

Absolutely no food, trash, baby wipes, floss, etc. You may be charged a double tank fee if there is a clog or jam when emptying the tanks. TELL YOUR GUESTS - YOU ARE RESPONSIBLE!
